

WILLBRANDT Rubber Expansion Joint Type 55

■ mainly in stock

DN 20 to DN 1000

Type 55 is a low corrugated, highly elastic rubber expansion joint that achieves minimal flow resistance due to its flat corrugation. It reduces structure-borne noise to a high degree and is characterised by its high movement absorption in all directions. Due to the wide variety of rubber qualities, a suitable rubber compound is available for every application (see material descriptions on the following page).

Type 55 is used in building technology, plant engineering, water and wastewater technology, engine construction, shipbuilding and solar and wind energy plant construction. Here it is used specifically to absorb movement and vibrations and to dampen noise.

Bellow design	Low corrugated rubber bellow with reinforcement and shaped sealing bead with core ring, self-sealing (no additional seals required). Suitable for swiveling flanges.	Vacuum resistance	<ul style="list-style-type: none"> - DN 20 to 50 vacuum-proof - DN 65 to 250 up to -200 mbar - DN 300 to 1000 not vacuum-proof - With vacuum supporting spiral/ring from DN 65 to DN 1000 vacuum-proof
Flange version	Both sides with swiveling flange made of galvanized steel, drilled according to DIN PN 10 (standard). Other materials and dimensions are possible.	Accessories	<ul style="list-style-type: none"> - Tie rods - Vacuum supporting spiral/rings - Guide sleeves - PTFE lining (see type 55 PTFE on page 66) - Potential equalisation - Flame-resistant protective covers - Dust and splash protection covers - Earth cover / sun protection cover Further information on page 99 - 105.
Approvals/Conformity	CE, drinking water conform, shipbuilding approvals, TÜV tested in accordance with DIN 4809 (Detailed overview on page 5.)

Bursting pressure for DN 450 - 1000: > 30 bar
 DN 450 only available in red or yellow.

Important information

The expansion joints are designed for connection to a flange in accordance with EN 1092-1, form A/B, type 11. If the flange dimensions or surface finish differ from this, additional measures must be taken, such as installing an adapter disc (see also table „Rubber bellow sealing profiles“ on page 117).

WILLBRANDT Rubber Expansion Joint Type 55

Application

Type 55 red Sp

For heating installations according to DIN 4809. For many years of operation under constant loading with hot water and heating water at 100 °C/110 °C at 10 bar/6 bar operating pressure. Electrically dissipative surface. Not suitable for media with additives containing oil.

Type 55 red

For drinking water, hot water, sea water, cooling water with glycol or other chemical additives for treating water, weak acids and weak alkalis, salt solutions, technical alcohols, esters and ketones. Electrically dissipative surface. Not suitable for oil products or cooling water with additives containing oil.

Type 55 yellow

For oils, lubricants, fuels, gases, city and natural gas (not liquefied) and DIN EN fuels with an aromatic content up to 50 %. Electrically conductive surface.

Type 55 green

For chemicals, aggressive chemical waste water and compressor air containing oil. Electrically insulating surface.

Type 55 yellow St

Like type 55 yellow with additional flame-resistance for up to 30 minutes at 800 °C. Electrically conductive inner surface and electrically insulating outer surface.

Important information

For aggressive media, please have the material resistance checked by our engineers.
The bellows must not be painted or insulated at media temperatures >50 °C.
Please also note the planning instructions.

WILLBRANDT Rubber Expansion Joint Type 55

Design A - without tie rods

Can be used for absorb movements in all directions (for combined movements, refer to the movement diagram in the technical appendix), for vibration and noise damping.

The expansion joint's reaction force must be absorbed through appropriate pipeline guidance (see planning instructions in the appendix).

*1 WF = effective area

*2 Other standards/dimensions possible.

*3 Utilisation rate of movement absorption decreases at higher temperatures (see technical appendix).

*4 Approx. weights with reinforcement from polyamide cord, with steel cord approx. + 3 - 7 %.

*5 Flange with threaded holes.

*6 Building length 130 mm

*7 BL 150: only in red (IIR) or yellow (NBR) available.

*8 Only in colour code red (IIR) and yellow (NBR).

*9 See type 39 and type 52

*10 Building length 260 mm

Important information

Please note the appropriate fixed point constructions and plain bearings in your piping system! Information on this can be found in our planning instructions. Regarding the bracing, please refer to the information in the technical appendix (page 99 - 102).

WILLBRANDT Rubber Expansion Joint Type 55

Bracings

A selection of different bracings are available to absorb the reaction force and to protect the bellows from overstretching or excessive compression.

Design B*

Tie rods, mounted in rubber bushing

Design C*

Tie rods, mounted in rubber bushing, inside with thrust limiter (plastic bushing)

Design E

Tie rods, outside with spherical washers/conical sockets

Design M

Tie rods, inside and outside with spherical washers/conical sockets

Design S

Tie rods, outside with limiters spherical washers/conical sockets, inside with thrust limiters (plastic bushing)

Design F

Hinge

* Note: Design B and C only up to DN 200 PN 10. The lateral movement absorption is reduced by around 50 %.

Warning: Deviations (+/-25 %) in the frictional force/torque may occur due to use of different materials and manufacturing processes.

WILLBRANDT Rubber Expansion Joint Type 55 SO for Shock Design

■ mainly in stock

DN 20 to DN 300

The type 55 SO is a low corrugated, highly elastic rubber expansion joint. Its flat corrugated shape minimises flow resistance. It has been specially designed for the shipbuilding industry and is characterised by its high shock expansion absorption.

Type 55 SO is primarily used in naval shipbuilding, where it is used to absorb movement and vibrations and to dampen noise, while at the same time protecting the connected units in the event of a shock.

Bellow design	Low corrugated rubber bellow with reinforcement and shaped sealing bead with core ring, self-sealing (no additional seals required). Suitable for swiveling flanges.	Vacuum resistance	- DN 20 to 50 vakuüm-proof - DN 65 to 250 up to -200 mbar - DN 300 to 1000 not vacuum-proof - With vacuum supporting spiral/ring from DN 65 to 1000 vacuum-proof
Flange version	Both sides with swiveling flange made of galvanized steel, drilled according to DIN PN 10 (standard). Other materials and dimensions are possible.	Accessories	- Tie rods - Vacuum supporting spiral/rings - Guide sleeves - PTFE lining (see type 55 PTFE on page 66) - Potential equalisation - Flame-resistant protective covers - Dust and splash protection covers - Earth cover / sun protection cover Further information on page 99 - 105.
Approvals/Conformity	CE, drinking water conform, shipbuilding approvals, TÜV tested in accordance with DIN 4809 (Detailed overview on page 5.)		

Specifications

Bursting pressure for DN 20 - DN 300: > 48 bar
DN 250 and DN 300 max. 10 bar operating pressure / bursting pressure 30 bar

Application

Type 55 SO red Sp

For heating installations according to DIN 4809. For many years of operation under constant loading with hot water and heating water at 100 °C/110 °C at 10 bar/6 bar operating pressure. Electrically dissipative surface. Not suitable for media with additives containing oil.

alkalis, salt solutions, technical alcohols, esters and ketones. Electrically dissipative surface. Not suitable for oil products or cooling water with additives containing oil.

Type 55 SO red

For drinking water, hot water, sea water, cooling water with glycol or other chemical additives for water treatment, weak acids,

Type 55 SO yellow

For oils, lubricants, fuels, gases, city and natural gas (not liquefied) and DIN EN fuels with an aromatic content up to 50 %. Electrically conductive surface.

Important information

The expansion joints are designed for connection to a flange in accordance with EN 1092-1, form A/B, type 11. If the flange dimensions or surface finish differ from this, additional measures must be taken, such as installing an adapter disc (see also table „Rubber bellow sealing profiles“ on page 117).

For aggressive media, please have the material resistance checked by our engineers. The bellows must not be painted or insulated at media temperatures >50 °C. Please also note the planning instructions.

WILLBRANDT Rubber Expansion Joint Type 55 SO for Shock Design

Design A - without tie rods

Can be used for absorb movements in all directions (for combined movements, refer to the movement diagram in the technical appendix), for vibration and noise damping.

The expansion joint's reaction force must be absorbed through appropriate pipeline guidance (see planning instructions in the appendix).

*1 WF = effective area

*2 Other standards/dimensions possible.

*3 Utilisation rate of movement absorption decreases at higher temperatures (see technical appendix).

*4 Approx. weights with reinforcement from polyamide cord.

Shock absorption in any direction ±50 mm

Important information

Please note the appropriate fixed point constructions and plain bearings in your piping system! Information on this can be found in our planning instructions.

Regarding the bracing, please refer to the information in the technical appendix (page 99 - 102)!

WILLBRANDT Rubber Expansion Joint Type 55 PTFE

■ not in stock

DN 25 to DN 700

Type 55 PTFE is a low corrugated rubber expansion joint lined with PTFE. Its low corrugation minimises flow resistance. The PTFE lining gives the expansion joint good anti-adhesive properties and is chemically resistant.

The PTFE lining can be used with any type 55 rubber compound. However, it is important to ensure that the selected rubber compound achieves the highest possible resistance to the medium, as this is the only way to achieve an optimum service life.

*1 For larger nominal diameters, feasibility must be checked.

*2 WF = effective area

*3 Other standards/dimensions possible.

*4 Building length 130 mm

*5 Only in colour code red (IIR) and yellow (NBR).

*6 See type 39 and type 52

*7 Building length 260 mm

Pressure resistance

Max. 6 bar operating pressure with polyamide cord reinforcement, max. 9 bar operating pressure with aramid or steel cord reinforcement.

Conformity

FDA and EG 1935/2004
(Detailed overview on page 5.)

Vacuum resistance

Only limited suitable for vacuum operation. A PTFE vacuum supporting ring, which allows full vacuum for small nominal diameters, can be used from DN 50.

The PTFE supporting ring can only be used up to 50 °C.
DN 25, DN 32, DN 40 and DN 350 expansion joints are not suitable for vacuum operation.

Important information

The expansion joints are designed for connection to a flange in accordance with EN 1092-1, form A/B, type 11. If the flange dimensions or surface finish differ from this, additional measures must be taken, such as installing an adapter disc (see also table „Rubber bellow sealing profiles“ on page 117).

Rubber expansion joints with PTFE lining are not suitable for absorbing vibrations. The bellows must not be painted or insulated at media temperatures >50 °C. Please also note the planning instructions.
